## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

2. Claims 1-6, 8-9 are rejected under 35 U.S.C. 102(a) as being anticipated by JP 10 52195. The JP '195 patent shows in Figs. 2 and 5 a main body 10, two hoods 11, 20 with hood 11 being movable, a nut member 12 threadingly 31 engaged to the main body for moving the movable nut member 46 relative the main body by rotation. JP '195 shows a click sound generation means 37-38, 51 between the main body and the nut member. The click sound generating means includes a recess, a coil spring 52, and a protrusion 51 on the end of the spring. The protrusion is engageable with one of the recesses 53 which are arranged in an axial direction of the main body.

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject

Art Unit: 3643

matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over JP '195.

The patent to JP '195 shows a fishing rod with a reel seat as discussed above. JP'195 does not show the coil spring, the protrusion and the recesses on other members than the pair of hoods and the nut member, but it would have been obvious to mount the coil spring, the protrusion on other members since the function is the same and no stated problem is solved.
